

### IN THE SPECIFICATION

Please amend the paragraph beginning on Page 10, line 12 as follows:

Ideally, the rate should be approximately 10 grams moisture per 100 square inches per 24 hours. The usable (practical) range for most applications is 5 to 15 grams per 100 square inches per 24 hours. The possibility exists to use rates as low as 0.1 grams per 100 square inches per 24 hours if a necessity exists to maintain a humidity ~~level~~ level in a chamber that has very little, if any, permeation of moisture vapor through the walls or if one is willing to build a pouch with a very large surface area.

Please amend the heading on page 18, line 12 as follows:
